## Chapter 111. Texas Essential Knowledge and Skills for Mathematics Subchapter B. Middle School

## §111.27. Grade 7

(a) Introduction.
(1) The desire to achieve educational excellence is the driving force behind the Texas essential knowledge and skills for mathematics, guided by the college and career readiness standards. By embedding statistics, probability, and finance, while focusing on computational thinking, mathematical fluency and solid understanding, Texas will lead the way in mathematics education and prepare all Texas students for the challenges they will face in the 21st century.
(2) The process standards describe ways in which students are expected to engage in the content. The placement of the process standards at the beginning of the knowledge and skills listed for each grade and course is intentional. The process standards weave the other knowledge and skills together so that students may be successful problem solvers and use mathematics efficiently and effectively in daily life. The process standards are integrated at every grade level and course. When possible,

- students will apply mathematics to problems arising in everyday life, society, and the workplace.
- Students will use a problem-solving model that incorporates analyzing given information, formulating a plan or strategy, determining a solution, justifying the solution, and evaluating the problem-solving process and the reasonableness of the solution.
- Students will select appropriate tools such as real objects, manipulatives, algorithms, paper and pencil, and technology and techniques such as mental math, estimation, and number sense, and generalization and abstraction to solve problems.
- Students will effectively communicate mathematical ideas, reasoning, and their implications using multiple representations such as symbols, diagrams, graphs, computer programs, and language.
- Students will use mathematical relationships to generate solutions and make connections and predictions.
- Students will analyze mathematical relationships to connect and communicate mathematical ideas.
- Students will display, explain, or justify mathematical ideas and arguments using precise mathematical language in written or oral communication.
(3) The primary focal areas in Grade 7 are
- number and operations,
- expressions, equations, and relationships,
- and measurement and data.

Students use concepts, algorithms, and properties of rational numbers to explore mathematical relationships and to describe increasingly complex situations. Students use concepts of proportionality to explore, develop, and communicate mathematical relationships, including number, geometry and measurement, and statistics and probability. Students use algebraic thinking to describe how a change in one quantity in a relationship results in a change in the other. Students connect verbal, numeric, graphic, and symbolic representations of relationships, including equations and inequalities. Students use geometric properties and relationships, as well as spatial reasoning, to model and analyze situations and solve problems. Students communicate information about geometric figures or situations by quantifying attributes, generalize procedures from measurement experiences, and use the procedures to solve problems. Students use appropriate statistics, representations of data, and reasoning to draw conclusions, evaluate arguments, and make recommendations. While the use of all types of technology is important, the emphasis on algebra readiness skills necessitates the implementation of graphing technology.
(4) Statements that contain the word "including" reference content that must be mastered, while those containing the phrase "such as" are intended as possible illustrative examples.
(b) Knowledge and skills

| Mathematical Process <br> Standards | $\begin{array}{l}\text { Reporting Category 1: } \\ \text { Numerical }\end{array}$ |
| :--- | :--- |
| Representations and |  |
| Relationships |  |$]$.

[^0]experimental data for simple and compound events; and
(D) make predictions and determine solutions using theoretical probability for simple and compound events.
(E) find the probabilities of a simple event and its complement and describe the relationship between the two;
(H) solve problems using qualitative and quantitative predictions and comparisons from simple experiments; and
(I) determine experimental and theoretical probabilities related to simple and compound events using data and sample spaces.
problems involving percent increase and percent decrease;

### 7.7 The student applies

 mathematical process standards to represent linear relationships using multiple representations. The student is expected to:(A) represent linear relationships using verbal descriptions, tables, graphs, and equations that simplify to the form $y=$ $m x+b$.

### 7.10 The student applies

 mathematical process standards to use one-variable equations and inequalities to represent situations. The student is expected to:(A) write one-variable, two-step equations and inequalities to represent constraints or conditions within problems;
(B) represent solutions for one-variable, two-step equations and inequalities on number lines; and
(C) write a corresponding real-world problem given a one-variable, two-step equation or inequality

### 7.11 The student applies

 mathematical process standards to solve one-variable equations and inequalities. The student is expected to:(A) model and solve one-variable, twostep equations and inequalities;
(B) determine if the given value(s) make(s) one-variable, two-step equations and inequalities true; and
(A) model the relationship between the volume of a rectangular prism and a rectangular pyramid having both congruent bases and heights and connect that relationship to the formulas;
(B) explain verbally and symbolically the relationship between the volume of a triangular prism and a triangular pyramid having both congruent bases and heights and connect that relationship to the formulas;
(C) use models to determine the approximate formulas for the circumference and area of a circle and connect the models to the actual formulas.

### 7.9 The student applies

 mathematical process standards to solve geometric problems. The student is expected to:(A) solve problems involving the volume of rectangular prisms, triangular prisms, rectangular pyramids, and triangular pyramids;
(B) determine the circumference and area of circles;
(C) determine the area of composite figures containing combinations of rectangles, squares, parallelograms, trapezoids, triangles, semicircles, and quarter circles; and
(D) solve problems involving the lateral and total surface area of a rectangular prism, rectangular pyramid, triangular prism, and triangular pyramid by determining the area of the shape's net.
develop an economic way of thinking and problem solving useful in one's life as a knowledgeable consumer and investor The student is expected to:

## (A) calculate the sales tax for a given purchase and calculate income tax for

 earned wages;(B) identify the components of a personal budget, including income, planned savings for college, retirement, and emergencies, taxes, and fixed and variable expenses, and calculate what percentage each category comprises of the total budget;
(C) create and organize a financial assets and liabilities record and construct a net worth statement;
(D) use a family budget estimator to determine the minimum household budget and average hourly wage needed
(E) calculate and compare simple interest and compound interest earnings; and

## (F) analyze and compare monetary

 incentives, including sales, rebates, and coupons.|  |  |  | 7.11 The student applies mathematical process standards to solve one-variable equations and inequalities. The student is expected to: <br> (C) write and solve equations using geometry concepts, including the sum of the angles in a triangle, and angle relationships. |  |  |

|  | Total |  | 38 | uestions | 46 points |

This template was designed and created by Math GPS, LLC. It is not supported, or in any way recommended, by the Texas Education Agency. (Updated to correspond to the Spring 2023 STAAR blueprint)

[^0]:    (C) select tools, including real objects, manipulatives, paper and pencil, and technology as appropriate, and techniques, including mental math, estimation, and number sense as appropriate, to solve problems;
    (D) communicate mathematical ideas, reasoning, and their implications using multiple representations, including symbols, diagrams, graphs, and language as appropriate;
    (E) create and use representations to organize, record, and communicate mathematical ideas;
    (F) analyze mathematical relationships to connect and communicate mathematical ideas; and
    (G) display, explain, and justify mathematical ideas and arguments using precise mathematical language in written or ora communication.
